Schöck to launch new acoustic insulation solution at Futurebuild Stand C45

Innovative product developments, comprehensive performance certification and an exciting range of software support packages, all combine to strengthen Schöck's continued position as the number one supplier of verifiable performance thermal and acoustic insulation technology. This year, Schöck pushes the boundaries even further with its new Tronsole impact sound insulation solution for all structural subsections on both straight and winding staircases. It is a system consisting of perfectly integrated impact soundproofing elements, which combine dependable sound insulation with straightforward installation.

Also on display of course is the market-leading Schöck Isokorb structural thermal break range, offering unrivalled thermal performance for both standard and Passivhaus construction. All supported by an extensive range of downloadable software and the latest BIM developments.

Two Schöck Workshop sessions at 'Let's Talk Specification'

Schöck will be presenting both their thermal insulation and acoustic insulation product solutions at the Workshop in the Knowledge Forum Area on Tuesday 5th March. The first session (11.10am) will focus on: Thermal bridging, what it is, where it occurs, what its effects are, what the UK building regulations demand – and the verifiable solutions available. In the afternoon (3.00pm) Schöck will be introducing the new ready-to-install integrated Tronsole impact sound insulation system for both straight and winding staircases.

The Schöck team is of course on hand throughout to discuss any of the new developments and to offer 'live' consultancy advice on any project specific requirements you may have.
